Seek Systems Announces New Low-Cost Storage Systems

Garrison delivers up to 4 Terabytes of low cost storage in single chassis

Woodinville, Washington – June 1, 2004 – Seek Systems, Inc., provider of FasFile RAID and solid state products for the high performance storage market, today announced the availability of the new Garrison storage systems.

Based around Fibre or SCSI controllers and using the latest disk drive technology, Garrison delivers exceptional performance and flexibility at a extremely attractive price point.

Typical applications for the Garrison storage system are corporate historical data, email archives, medical imaging, audio and video files, and geophysical data. Until recently, the cost of on-line storage of this type of data was inflexible and expensive. Garrison provides safe, reliable, and simple to install storage at a breakthrough price point.

The basic Garrison unit is a rack-mounted, self-contained enclosure containing controllers that can be configured for Fibre or SCSI connections and can be populated with up to 16 disk drives. Units may be aggregated to build data repositories of hundreds of terabytes. Garrison supports RAID 0, 1, (0+1), 3, 5, 10, 50, NRAID and JBOD. Reliability features include hot swappable fans, power supplies, and drive units. Hot swap drives are supported along with automatic rebuild of a failed drive. Management software is provided via a robust built in GUI.

About Seek Systems

Seek Systems, Inc. designs, builds, and supports high-performance data storage solutions. The company develops innovative technology and solutions for direct attached and Storage Area Network (SAN) applications, which are sold directly and through a network of authorized resellers.

Seek Systems, Inc. is headquartered at 19501 144th Ave.NE, Suite B500, Woodinville, WA, 98072. Seek Systems can be contacted at (425) 806-7335. Information can be found by visiting www.seeksystems.com or by e-mailing info@seeksystems.com.
